HOW TO INTERPRET THE RESULTS OF THE BATH WATER ANALYSIS E. COLI FAECAL STREPTOCOCCI

- **Below 100 cfu/ 100 ml:** It means that the bathing water has excellent or optimum quality.
- **Between 100 and 2.000 cfu/ 100 ml (E. COLI).**
More than 100 cfu/ 100 ml (FAECAL STREPTOCOCCI) only in 1 out of 10 samples: It means that the bathing water is suitable for bathing because it complies with the European Union Directive.
- **More than 2.000 cfu/ 100 ml (E. COLI). More than 100 cfu/ 100 ml (FAECAL STREPTOCOCCI) in 2 or more out of 10 samples:** It means that the water is not suitable for bathing because it does not comply with the European Union Directive. It is possible the existence of pollution caused by the sewage.

THE BATHING WATER QUALITY

This beach has obtained this year the Q of Quality. It means that it complies with a group of criteria related to the bathing water quality, the beach cleaning, sanitary services, safety and also it signifies that the municipality offers information and develops environmental education activities.

In addition, it means that the bathing water quality is controlled regularly, analyzing certain types of bacteria at least every two weeks during the entire bathing season.

In the box above, you can check when the last water analysis was and how many bacteria were found. If it is detected a small number of bacteria, the water is very clean. - A big number of bacteria indicates that the water may be contaminated and may contain bacteria from the sewage. The limit allowed is specified in the box above.
